

CONSTRUCTION

Hull, deck and ancillary mouldings are constructed in heavy duty hand lay up GRP. The outer layer of the hull is laid up in Vinylester resin, subsequent layers are reinforced with chopped strand mat and woven rovings used in combination, the thickness increasing in critical vulnerable areas. The hull is stiffened below the waterline by bonded-in bulkheads and longitudinal stringers. The cabin and cockpit are formed by GRP modules which are bonded into the hull to increase rigidity. One piece deck moulding utilises complex core stiffening and is both bonded and mechanically fastened to the hull.
